Product Information

## Ahh-some Washing Machine Bio-Cleaner & Deodorizer

Today's High Efficiency washing machines are great at saving resources and the environment, which is great for all of us! However, one drawback to these new machines is that they develop mold, mildew and fungi that can really smell terrible and leave your clothes feeling and smelling like they were never washed. Our unique product, *Ahh-some Washing Machine Cleaner and Deodorizer* can eliminate this condition after just one cycle. Our product can be used in your household dishwasher as well. Below are the simple instructions for our product. Be sure to use this every month or so to maintain washers that are free from bio-contaminants.

Dilute one half (1/2) teaspoon of washing machine Ahh-some gel in warm water and add it to the detergent hopper of your EMPTY washing machine using HOT WATER and a short cycle. It is also recommended to add a few teaspoons of household bleach during this cleanse and purge cycle. That's it! Since the Ahhsome Cleaner disrupts the bio-contamination build-up you may notice a distinct odor that will disappear after you do your next regular wash load. Bio-Contaminants can smell terrible when they are disrupted. All is gone after the next washer use. Your towels and sheets will have a wonderful fresh aroma to them that you haven't experienced in years. Do this every 3-4 weeks and your washing machine odor smell(s) from mold, mildew and fungi are history. Our product can be added directly into the washer drum or diluted with regular water and poured into the machine where you add detergents and or bleach. This will also clean those pathways as well.

**The Ahh-some** cleaning gel formula can be mixed with water at the rate of 16 oz in a spray bottle for all your tough cleaning household jobs. It works great on cleaning jewelry as well. Try it! Tell your friends and neighbors.

Dishwashers can also be cleaned of fungi with our product. Simply add 1/2 teaspoon to your dishwasher every 3 months and run it on the hot water short cleaning cycle. You'll be amazed at the difference you will see.
