

# Give your Jetted Bath, Hot Tub or Swim Spa a Complete Plumbing Colonoscopy

# Ahh-Some®

## Purging Hot Tub/Spa Plumbing & Jets with Ahhsome

### Step by Step Instructions

1. Adjust water chemistry to proper balance. Add additional sanitizer before purging.
2. Remove all pillows and headrests if removable.
3. Add 3/4 level teaspoon per 100 gallons of Ahh-Some.
4. Remove filter(s) from hot tub filter well. Hose them off. Place them into the hot tub.
5. Run the pump(s) and blower to attain maximum circulation. Be sure to open air intake valve(s). Note: Foaming will occur soon after pumps are turned on. This is Normal.
6. If Foaming is excessive, turn pump(s) off for a few minutes. Turn on again soon after.
7. Run the jets and blower (if equipped) for 20-30 minutes opening ALL jets and waterfalls.
8. Shut the system down. Wipe away clinging gunk and grime from shell with towel.
9. Drain the tub. Be sure to dump as much of the dirty water as possible. It is Ok to drain on the ground, in flower gardens or grass. Do NOT drain into lakes or a stream.
10. Remove the filter(s) from the hot tub and hose clean. Rinse the tub with fresh water.
11. Use rubber gloves and a good cleaner while rinsing and wiping the shell.
12. Mix 1/8th of a level teaspoon of Ahh-Some with 32 ounces of water in a trigger spray bottle to make a wonderful cleaner for the acrylic shell wipe-down.
13. Wipe the hot tub as clean as possible, getting the sticky gunk off the interior finish.
14. Fill the hot tub with water to proper level; replace filter(s) into filter well. Balance water and add proper sanitizer. Be sure to use a reliable test kit for proper chemistry.
15. Repeat every 4-6 months. Some tubs may need consecutive and additional purges.
